Supercharger Road Test			
Independently Conducted Test Data See Web site for more details			
TEST	SC - MAN.	SC - AUTO	STOCK
0 - 60 mph	6.95 sec.	7.66 sec.	8.96 sec.
1/4 mile	15.27 sec.	15.96 sec.	16.8 sec.
1/4 mile	91.99 mph	86.05 mph	81.9 mph

The test data on supercharged vehicles comes from a Motor Trend test session conducted on Oct. 20th in Southern California. Stock vehicle data is an average of results from 3 published road tests on a 5-speed car.

* Rosewood image not available at press time, see our website for details.

Our tuning approach is an expression of the original Bauhaus movement's philosophy, which dictates that truly useful FORM can not exist without an intimate knowledge of FUNCTION. We believe that tuning on a budget, relative to the price of the PT Cruiser, should not necessitate a sacrifice in quality or in performance and that a complete tuning concept must result in a balanced vehicle. This balance can only be achieved by addressing the PT Cruiser as a system. This approach has helped us advance the PT Cruiser as a modified, yet balanced system with overall performance that is significantly greater than that of the production vehicle.

PT-TUNING'S PRODUCT WARRANTIES:

All PT-Tuning products carry a Limited Warranty from defects in materials and workmanship to the original purchaser of the part for a period of one-year from the date of original retail purchase. If such a defect appears during the warranty period, PT-Tuning will repair or replace (at its option) the product without charge, except for transportation costs both to and from our product warehouse. Some products carry a "Limited Lifetime Warranty" which covers repair or replacement to the original retail purchasers for as long as they own their cars. These warranties are not transferable to any subsequent owners. See our website for further details.
